

In my opinion it also would have been sufficient enough to just write the report and instead of a GUI just require a simple application of the model in a language of choice with a proper visualization where the adjustable parameters can just be passed from command line or something similar.

The model itself was not too challenging. Exploring it in the creation of the report has definitely helped understanding the model better. For my specific model it was also very helpful to have the Master thesis of Alexander Jochim at hand.
